I'm not a robot

You cant perform that action at this time. You cant perform that action at this time. You cant perform that action at this time. '''DISCLAIMER: We do not condone cheating or hacking of any type. We will ban any hackers than join this wiki, and we discourage the act of hacking and cheating. It ruins the game for everyone.''' What is Hacking?[]Hacking/Scripting/Cheating is when someone downloads a script usually through the website known as GreasyFork or Pastebin and then uses it through an extension usually through the extension Tampermonkey when playing the game.Another type of hacking is when someone uses a recorder to record a macro which would allow them to Auto Hat switch or Auto-Heal. However, macros are not as efficient as scripts.Either, way hacks are used so that whomever is using them will have an easier way to beat the game or because they hate the game so much that they are willing to kill it with hacks. However, some good hackers will use the power of hacks to hunt those bad hackers and make them rage quit.Types of Hacking[]There are multiple types of hacking. Feel free to add what you've seen so other people know what to expect. Also, add how to identify them and how to kill them. Auto-healing[]The most common type of hacking is auto-healing, in which a player does not have to press Q-Click to heal. The script heals for them. It frees their hands and makes them harder to kill. This also depends on the mod that they are using eg: in supermod you can change how fast or slowly you heal.How to Identify an Auto-healer[]Bob XIII Hat File:Screenshot 2020-10-27 at 11.14.34 AM.pngAs said, auto-healers are the most common types of hackers in MOOMOO.io. To identify one, notice if they instantly heal all the damage you apply to them. If they do, they probably autoheal. Note that some hackers can disable autoheal, and some people heal fast without hacks.Another way to tell if someone is auto-healing is if they have the Shame! hat. This hat is meant to root out auto-healers by detecting if they heal very fast. Of course, some professionals get this hat because they heal fast but don't auto-heal. When equipped with the Shame! hat, a player does not get the effects of the hat that they were wearing, and they cannot heal for 30 seconds. If you see someone with the Shame! hat, attack them. If they are auto-healers, you will be doing a service to the MOOMOO.io community. If they are professional, you can say, "I killed a pro!" Either way, it's good for you.How to Kill an Auto-healer[]Killing an auto-healer is no simple task. Even professional MooTubers occasionally have trouble. If you don't feel up to the task, don't try. If you think you can attack them, think again. You have to be really good to kill an auto-healer. (You don't have to be Apple Pie, Corrupt X, or any super gods you see when you play, but you need some skill and practice)If you really want to kill an auto-healer, here are tips:Use the YouTuber Corrupt X's "Circle of Death" tactic. Here, you use Pit Trap to trap a victim, then surround them with Spikes, place two Turrets, equip your melee weapon, equip Bull Helmet, and attack. It will be hard for them to survive this, even with scripts.Pit Traps are extremely useful for killing Auto-healers. Even if you fail to place it on the edge where it starts dealing immediate and rapid damage, you can push the hacker toward the spike. Push slightly and cautiously, as you don't want the hacker to spring out of the Pit Trap. When players are pushed too fast and too far into a spike in a Pit Trap, they bounce out due to high knockback.If you are a pro, you can use a booster and get them into your boost. Then just spam spike in a way that it continuously deals damage and they will die if you do it properly. Unfortunately, it is not the most effective way to kill an auto healer. (Stick is recommended for speed and for fast resources)Daggers or weapons with good reload time (use Samurai Armor), might be able to defeat an auto-healer. If backed up against several Spikes or Cacti, the script will be forced to heal often. In this case, the auto-healer may take 100 damage or over in a very, very short time and die immediately. If the script keeps them alive, although they heal perfectly fine, the Shame! hat will equip itself on them, and they will die.The firing squad. This will take several people, so this is only usable occasionally. First you trap an auto-healer, then, using the repeater crossbow with your teammates, gun the auto-healer down. If timed in a way so you're not shooting at the same time, the hacker will eventually get the clown hat. This is very expensive but is the safest as you're not exposing yourself to danger. The goal is to outlast your opponent, so this strategy will require about 2500 wood (250 arrows or 7500 potential damage). Also you can all get muskets, and shoot the hacker at the same time, you can also kill him.Drones Hacker[]Some people have "drones(aka bots)" that come in large groups of 4, but they are not strong. Each drone is only Age 1. They all move the same way, they face the same way. They also usually have the same name.Why do Drone-Controllers do it?[]Sometimes they kill their drones, giving them kills and gold, and given that the drones respawn, the drones are an infinite supply of kills and gold.How to Identify a Drone-Controller[]It's not hard to identify the controller once you see the mob of drones. The drones are always in the same tribe (otherwise they would kill each other) and sometimes they even have the same name as their controller. Drone Controllers also are often not in big servers with 35-40 players, for they can't summon as many drones because of the player limit.How to Kill a Drone-Controller[]First, you need to kill the Mob. Crowd control Weapons with a good reload or range are useful when fighting drones. Bat, Polearm, and Katana are all useful since they have long range. Don't use Structures, because, with the many drones, the Structures will be easily destroyed. Bat is okay since the drones usually don't heal. They have strength in numbers, not strength in skill. If the drone controller also has auto-healing scripts, then you might have a problem, to be honest.Daggers are also useful here. If you are good at healing, you can charge into the Mob and start attacking in all directions. The Mobs don't stand a chance if you heal well. Use Dark Knight to heal by doing damage to them, so that you don't lose too much Food.Once you kill the Mob, kill the controller. You should realize that the drones immediately respawn. So don't wait around after killing the mob. They will come back.If you have good healing(maybe good enough to heal insta if the drones have high dps) and good spike spamming, you can spam the spikes in a way that it surrounds drones and instantly kills them (some pros can spam spikes so that it looks like hack or macro just need practice).Quad-Spiker/Trapper[] Example of a Quad-Spiker. Some players install scripts that allow them to instantly place four Spikes\Pit Traps around them. This can be a problem because as you charge towards them to kill them, they place down the four Spikes, and you die. This will also happen if your using a mod which allows you to spike boost trap.How to Identify a Quad-Spiker/Trapper[]You cannot identify this type of hacker on sight. Often, you charge at them, then you see they hack, and you die. In such a case, you should come back for revenge. If you see them kill someone with this hack, note their name, and be wary of that person.How to Kill Quad-Spiker/Trapper[]As said, be wary. Place down Pit Traps so that they get caught and cannot place down all four Spikes at once. Blockers are good to stop them from placing down spikes or put Pit Traps all around you. The hacker will not be able to put Spikes/Pit Traps where there are objects. There really is no easy way at all to defeat these hackers.One way is to keep coming at them, then quickly retreating, to force them to place four spikes/pit traps. As the limit of spikes is 15, eventually theyll run out if neither you nor he doesn't destroy them. Force him away from the battlefield. Don't let him reuse his Spikes. Eventually, theyll run out of Spikes and you will be free to kill him.Another way is by coming at him, retreating away quickly, and then break one of his spikes and place your. Since their spikes are so close to each other they will hopefully hit your spike and hit it again and die or get the Shame! Hat. (There is no guarantee it will work)You can also use a Platform and a Repeater Crossbow. Go close to the hacker and wait for him to use his hack. Then step on a Platform down and start firing. However, this doesn't work if he auto-heals as well. Unless you're in a team with other repeaters. With several repeaters, you can gun down them in seconds. Even with healing, they will eventually get the Shame! hat. To make sure they are not going to get out, surround their spikes with pit traps.Another way is to surround the hacker with spikes and a pit trap for an exit (preferably if it doesn't show the pit trap icon) and you can kill them in 2 ways. One, they die from the knockback of spikes, or (the more dangerous one if the hacker also insta) they get trapped and you use the circle of death on them or just use shield and push them.Or wait for the hacker to use the hack, then before he gets out, kill him with long range weapons or spike him.Instakill[]Instakill (Polearm [Range] Combo) Hackers[]Instakill (Polearm [Range] Combo) Hackers are players who abuse the damage of Polearm and Crossbow or Musket, where the script user hits the target with Bull Helmet and Polearm, then immediately switches to Crossbow or Musket to instakill. A more advanced version also incorporates a turret hat for extra damage.How to Identify an Instakill Hacker[]If you see a player with Polearm and Monkey running around, there can be a chance that it is the hacker, for they use Monkey Tail to catch up with their prey, trap them, and perform the combo. It is indeed possible for some professionals to pull off legibly. (lots in fact.) Another way to identify one is (for some hacks not all hacks do) when they instakill someone, there will be a message teasing the player that has died. Some seen messages are: BOOM ONE SHOT!, ~~Why So Ez LoL~~, Ez, Get Rekt Noob, EZ HAHA, samurai: fastest and much more.How to Kill an Instakill Hacker[]You can counter by using Shield or wearing Soldier Helmet to stop them from completely killing you in one blow. Or you can have your food out, and spam clicks if you can't do the other methods. After the player performs the combo, the Polearm has to wait until hitting again. Thus, you can heal back your health. Killing the hacker requires the Circle of Death. Another effective, but suicidal way to kill them is with Katana + Spike Gear + Corrupt X Wings. This will only work when you and the guy you're trying to kill both have Diamond/Ruby weapons. If you have stick use soldier helmet. Or if the hacker has a low auto heal speed (One know hack is the Super Mod that has low auto-heal speed) and you're good at insta, then insta them. (It works!!!) Recently the instakill hack has gotten better and it can now instakill people with soldier and who have autoheal. Shield is the best counter to this.Instakill (Dagger Musket Combo) Hackers[]These hackers use their hacks to equip Bull Helmet quickly, hit you, equip Musket then shoot you, then hit you again with their Ruby Daggers.How to identify and killSame as polearm hacker. Use shield if your heal sucks. or else surround the hacker with spikes and wait for them to break free and attempt to run out. Then at the last moment, place it down and the hacker should die from the knockback if they are a noob(unless they break your spikes first).Instakill (Katana Musket Combo) Hackers[]These hackers are very hard to kill because they can equip bull, hit you, switch to musket and equip turret gear to insta you quickly.How to identify:Same as the polearm hacker; if a player is running around with katana and monkey tail, they are likely hacking. How to kill:[]Same as the polearm hacker; use shield + soldier if your heal sucks; get close to the hacker to try using the Circle Of Death tactic against them; try placing spikes to at least slow the hacker down, if you are lucky, the fool hacker will kept hitting the spike and get himself killed. Conclusion? Never get close to a hacker without being prepared, else the hacker will instakill you before you realize it. Auto Hats []These hackers use scripts so that when they travel they use speed Hats and Accessories, and when they attack another Hat of the hackers choosing isequipped. In combat, often when they swing their Weapon (usually a Polearm for its high damage), they switch from having Soldier Helmet and Monkey Tail equipped to just having Bull Helmet and then immediately switching back to their old Hats.How to Identify an Auto Hat hacker[]If you see a person that has all speedHats and Accessories equipped and they go into the River and right as they enter it the Flipper Hat is equipped, they are most likely a hacker. Also if a player comes towards you and when they attack the Bull Helmet is equipped automatically they are probably a hacker. You also might see a hacker that when they attack with the Great Hammer only, the Tank Gear is equippedHow to Kill an Auto Hat Hacker[]These hackers are very hard to kill because the hacks make them very efficient at everything. Try to get those hackers in a trap and use the Circle Of Death tactic on them, but if they use Great Hammer and the Tank Gear is equipped automatically this might not work. Try to get the hacker pinned against the end of the world and a Tree and place a Spike there and the hacker will heal so fast they will get the Shame! Hat and die (This depends on the time and place you meet the hacker). But sometimes they are also smart because they sometimes put their own spike behind them and it will take a shorter time for a hacker to break out of a trap than you breaking their spike. That's the advantage of auto hat, they can easily equip Tank Gear.How Do You Really Punish Auto Hat Players?[]The top 3 ways to kill a hat macro user, sandbox or normally, is:1: To out-melee them. Just spam them with Daggers, Axe, or any weapon with good dps. To boost the dps, you can equipped bull helmet, samurai armor, or bloodthirster. Also spike gear and Corrupt X Wings could help. If they have autoheal, too, eventually their autoheal will break or they will get the Shame! Hat.2: Instakill them. Polearm-Musket-Bull Helmet-Turret Gear is most recommended way to punish them by instakilling. Before you instakill, remember to hold out your musket for 3-4 seconds before trying again. Before even thinking about killing them like that, trap them in pit trap to for you to strike, this can be hard if they auto-equip Tank Gear when breaking structures. This is also recommended for fighting against autohealers in general.Boost/Spike Hack[]These hackers use boost pad to rush towards an enemy while placing spikes on the side , so their own opposing side fighters cannot ride on the boost pads and victims get trapped and die. These hackers are especially lethal if you don't know they hack. They also can boost at you and quad spike/spam spikes when at your location.How to Kill a Booster Spike HackerIf you know a player is a hacker, you can prepare yourself in advance for when they charge at you. Placing spikes so they boost into them is a way to insta some hackers, but they usually also have auto-heal. Placing a pit trap gives you the advantage of being able to trap the hacker while boosting. It also can act as a disruption to their hack, as they cannot place buildings on your pit trap. Hacks also make a computer very slow, so use this to your advantage when you suddenly see a hacker stop. You can dodge the incoming hit or fight back. Exhausting their supply of spikes and boost pads also work when trying to run away or kill one of these hackers.How to Kill a Booster Spike Hacker in SandboxThese hackers are very deadly and can be especially deadly in sandbox mode because of infinite materials. In order to kill these hackers, simply place spikes all over the place. When they booster towards you, chances are they will hit the spike and die. Placing pit traps will also stop a booster spike hacker, however it probably won't kill them. In the regular server, just place pit traps and spikes and obtain good reflexes. Some pros can dodge a boost+spike hacker. Sometimes, the best option will be to move as little as possible because the boosts will have a large gap between them. A good way to disrupt boost+spike is to use blocker so the hacker can't build.Multiboxing Hackers[]These hackers control multiple players at a time, and they usually have musket, repeater, polearm, or katana. Each player attacks at the same time so it will be instakill if you get hit by all of them These hackers usually have other hacks. How to kill these multiboxers?[]1. Use Teleporter. The teleporter can be used to separate the hackers to make them easier to kill. 2. Use shield to not get killed, then attack with spikes. Will work if they don't have autoheal.3. Pit trap them.4. Bow spam.5. Boost spiking may be hard for some people but it works well on multiboxers.River glitch Hackers[]These types of hackers will make it so that if when you press Enter Game, you will not spawn and instead just see a blank river. You can't kill these hackers because they will just river glitch the server. Crash Hackers are useful when it comes to unriverglitching servers, plus there is a bot with the name of AntiRiverGlitch to prevent the crashing river glitch from happening.Be noted that river glitch is obsolete now, as Sid or the other Devs fixed it.360 hit hackers[]These type of hackers can hit in every single directionThis is basically the same as killaura in Minecraft.To kill them, just kill them. If your aim isn't trash they have almost no advantage over you if their only hack is 360.360 hit hacks are patched, if you see someone hitting someone behind him, he is using an aimbot hack, thats aimbot not killaura.WS Senders[]A WS sender is a type of hack that allows someone to get any weapon/upgrade available at a certain age (e.g. Katana at Age 8, Spinning Spikes at Age 9) regardless of whether or not they picked the upgrade prior.How To Identify[]Users with a WS hack are especially apparent when seeing some in game with impossible loadouts such as Katana and Musket, as it is impossible to obtain one with the other legitimately. It is also dangerous with the setup of Stick and Spinning Spikes, as Stick users are usually unable to obtain Spinning Spikes normally.Counters[]WS Senders have no real counter, as setups such as Stick and Spinning Spikes provide a slight, yet visible advantage against normal players. However, in situations such facing against a Katana and Musket player, you would play similarly (though still cautiously) as if fighting against a Polearm and Musket player.Most of these players typically have other hacks alongside this one.Check out this page[]Here are some more tips on how to defeat hackers. check out this wiki page: has existed for a very long time, the first hacker came around in the form of auto-healers, when the food spam technique was popularised by the Youtuber "Corrupt X".Hacking/Scripting is one of the reasons that led to the downfall of the game in popularityOne hacking group known as "Nebula" were quite infamous for their creation of the drone hack, the hate against them went so far, that Sidney himself stated that there would be a killable Nebula Npc in Moomoo2.Several hack fixes have been mentioned in the Changelog, however, none of them have actually fixed anything besides the Shame! hat update which caused a large amount of drop in the number of auto-healers, when it was first released.On mobile and with skill, you can spin while placing two Spikes to simulate the quad-spike, although it only has 2 Spikes parallel to each other(if you are lucky and really skilled, it might come out as 3 or 4 Spikes.Some hackers have found their way around the system and managed to force the server for them to heal very fast without getting the Shame! hat by removing it or setting the chance to 0%. Do you want to gain an upper hand against your enemies and dominate the game map? Then you definitely need to read this guide. I will teach you about all the best MooMoo.io hacks you can use! I will also give you step-by-step instructions on how you can download and activate these hacks!Strap on your sword and crossbows, because youre on your way to becoming a master of this game. Lets begin, shall we? Introduction To MooMoo.ioIO games have become extremely popular nowadays. Theyre fun, addictive, and a great way to pass time. But do you know why the word .io is used in all these games? It all started with the grand-daddy of .io games called as Agar.io. It became quite popular on the internet, and every game that followed a similar structure started adopting the name .io into its title. Today, .io games refer to games that are casual, free to play, multiplayer, and browser-based.Now we come back to MooMoo.io. MooMoo.io is a popular .io game created by Yendis Entertainment. Your role is to gather resources and build a village. However, thats not all. You have to defend your village from other players and hostile animals like wolves. You can collect stone, wood, food, and gold to upgrade your weapons, buy traps, and build walls to protect your village. There is even an option to team up with other players to form tribes and build bigger villages together!The game does not have a specific or end goal. The only time the game will end is if your character dies. Once you die, youll have to start from scratch all over again. There is a leader board that tracks the gold earned by all the players in the server. Do you have what it takes to reach the top of the leader boards and hold your spot there from your enemies?Our MooMoo.io Hacks will make sure that you stay on the leaderboards as #1 for as long as you want.What Are MooMoo.io Hacks?MooMoo.io Hacks are certain scripts of code that are run to provide your character with special advantages. Players use these hacks to make the game easier and win battles faster. Although they are technically illegal in the game, theres nothing wrong with having a little bit of fun every now and then.There are many types of hacks and they all serve different purposes. Here are some of the most commonly used MooMoo.io Hacks.1. Auto-healing MooMoo.io HacksAuto-healing is the most commonly used MooMoo.io Hack. Within the game, the player has to click the Q button on their keyboard when they want to heal. This can sometimes be difficult when youre fighting multiple enemies, and you die because you couldnt fight and heal at the same time. The Auto-Healing hack uses a script to automate the healing process. So even if you dont click Q, the script will automatically heal you whenever you take even the slightest damage.2. DronesDrones are automated computer bots that follow the player and help them attack other players. These drones often come in groups of 4 and are part of the same tribe as the controlling player. Drones can help attack as well as defend. The only drawback is that they cant level up, so theyll always be at level 1. Theyll also all face the same direction.3. Quad Spikes/Traps Most Fun MooMoo.io HacksThis is a pretty interesting hack and it is a lot of fun to use. The hack allows you to instantly place four Spikes/Traps around yourself. This is extremely useful when an enemy player is directly charging at you for an attack. You can place the spikes as soon as they reach near you, and theyll run headlong into them and die immediately. Without this hack, youll have to manually place the spikes and traps one-by-one, which is time consuming.4. Insta-Kill (With Polearms/Musket)This is one of the MooMoo.io Hacks that have gained popularity in recent times because of how easy it is to use. The hack script executes a series of actions First the bull helmet is equipped and the enemy is attacked with the polearm (Bull helmet does 50% extra damage). Then the script immediately switches to Crossbow or Musket and shoots the enemy. The combined damage of the polearm and musket kills the enemy instantly.How To Download And Use MooMoo.io HacksHere is a step-by-step guide on how you can download and use different types of MooMoo.io Hacks.Step 1: Go to the Tampermonkey page on Google Chrome and add this extension to Chrome. Here is the link- is a script manager that will help you to run hacking scripts on your MooMoo.io game.Step 2: Go to the official Greasy Fork website. Its an online repository that contains millions of user scripts. They have the best collection of MooMoo.io Hacks and Scripts available on the internet. Here is the link the link will take you directly to the page with MooMoo.io scripts.Step 3: Find the script you want and open that link. Spend some time browsing through all the scripts and hacks to find the exact ones you want. This includes Auto-Heal, Insta-Kill, Drones, and some scripts even have all of them together.Step 4: Once youve opened the script page, click the green icon that says Install this script. The Tampermonkey extension we installed earlier will automatically activate this script.Youre all set now! Open MooMoo.io and start a game. Youll see that the script you installed has taken effect. Enjoy pounding your enemies to dust and building the biggest village you can!ConclusionThats all guys! I hope youve understood the different types of MooMoo.io Hacks and how you can install and activate them. Make sure you use these hacks only rarely because otherwise it ruins the fun for everyone! However, trying them out once or twice never hurts, so enjoy!Check our websites for more helpful hacking guides and cheat sheets!Android, Apple, Apps, Business, Design, Digital, Entertainment, Gaming, Guide, How to, iOS, Online, Reviews, Smartphone, Tech, Tips You cant perform that action at this time.
