Samsung refrigerator: Remove or install door and connect wiring harness This guide offers step-by-step instructions for removing and installing doors on Samsung refrigerators, including Side-by-Side, 4-Door Flex, 3-Door French, and top-freezer models. It covers essential steps for maintenance, door replacement, or installations, ensuring a smooth process. Detailed guidance includes disconnecting the wiring harness and Reset Ice Maker: Top Freezer The Auto ice maker is located inside the top portion of your freezer and can be reset if it isn't producing any ice. Due to the way the ice maker is positioned, you will need to remove the ice bucket from underneath it before running the test. Frost forms in the freezer or refrigerator Moisture forms in the fridge when warm air enters through a door being left open, warm or hot items stored inside, or compartments not sealing properly. When moisture freezes, it becomes frost. So let's take a look at where the frost is and what we can do to prevent it from happening in the future. Samsung ice maker makes too much ice Samsung's ice makers are designed to stop when they're full. There are two methods for this: either an optical sensor or a mechanical arm, which detects when it has piled high enough. If your ice maker won't stop making ice, it means ice is not piling high enough to reach the sensor or arm, typically because the ice bucket is not in its proper pos level your Samsung refrigerator To save energy and prevent potential cooling issues, or leaks, your Samsung refrigerator must be level. You can follow these leveling instructions in our guide. Thank you for your feedback! Your comment has been submitted. Samsung refrigerator: Remove or install door and connect wiring harness This guide offers step-by-step instructions for removing and installing doors on Samsung refrigerators, including Side-by-Side, 4-Door Flex, 3-Door French, and top-freezer models. It covers essential steps for maintenance, door replacement, or installations, ensuring a smooth process. Detailed guidance includes disconnecting the wiring harness and Test or reset your Samsung ice maker Resetting your ice maker isn't something you'll typically need to do very often. In fact, the only time you should ever reset your ice maker is when you're not getting any ice, and even then, it's the last resort, after other troubleshooting steps which are more likely to resolve your issue. But if you want to check if your ice maker is working, it Refrigerator or freezer doors will not close If the refrigerator or freezer doors will not close, it will impact cooling performance and eventually create frost. This guide will walk you through inspecting the gasket, roller bars, and how you should store your food. Autofill water pitcher doesn't fill There's nothing more refreshing than a glass of nice cool water, and having a pitcher full of it and ready to go is quite handy. But if your pitcher's not filling, the solution could be as simple as turning the setting on. Reset Ice Maker: Fridge compartment or Side-by-Side freezer Resetting your ice maker isn't something you'll typically need to do very often. In fact, the only time you should ever reset the ice maker in the fridge compartment is when you're not getting any ice, and even then, it's the last resort, after other troubleshooting steps which are more likely to resolve your issue. But if you want to check if you Thank you for your feedback! Your comment has been submitted. There are a few factors that can cause an ice maker not to work. If the ice maker appears to be making or enough ice, low water pressure or a faulty water filter may be to blame. When the ice maker makes small, clumpy, or clumped ice, could be something as simple as a dirty water filter, low water pressure, or higher mineral deposits in your water. In the event of a frost in ice bucket, some troubleshooting may be needed, and service may be required. Ice maker is not making any ice Ice maker is making some ice, but not enough Ice maker makes small, clumpy, or clumped ice Ice bucket is stuck or has a blockage The ice bucket must be inserted in the correct direction. If not, the ice maker will be blocked by the scoop cover and it will stop producing ice. Check if the scoop cover is located on the rear side (it will be marked by the word "REAR"). The back of the ice bucket is lower than the front of the ice bucket. The troubleshooting for an ice dispenser is different from the troubleshooting for an ice maker. If your model has an ice dispenser, and there is ice in your ice bucket, then see our not dispensing guide instead. The freezer needs to be at 0°F or less in order to produce ice (even for models where the ice maker is in the fridge compartment). If you have not set the freezer that cold already, it will temporarily get that cold when it needs to make ice and will not make ice until it gets that cold. So if it never makes ice, it may be that the freezer is unable to get that cold, which could be a cooling issue. Before touching the panel, check the displayed temperature for the freezer. If it is above what you have set it to, and the fridge hasn't been installed within the last 28 hours, then first see our guide for the fridge is not cooling enough. If you have set the freezer above 0°F, set it to 0°F or lower, and enable Power Freeze. Wait 3 hours and check the temperature again to see if there is a cooling issue. If it still hasn't gotten cold enough, troubleshoot the cooling issue first. If the ice maker is not properly sealed off, it may result in temperatures too warm to make ice. If the ice maker is in the fridge compartment, then the ice bucket needs to be fully seated and locked in its proper position. If the ice maker is in the freezer, then the freezer door needs to be closing correctly. If the freezer door does not close correctly, see our guide for that issue first. In either case, if there is frost in the freezer or on the ice bucket, refreshers that issue first as well. Most models have an Off icon, which will turn off when you're not making ice. For some production, change so it's not lit. If you are not sure how to do this, see our user manual, here. Alternatively, Top Freezer models have an Ice Maker On/Off button. If you want to make ice, simply press the Ice Maker On button. If you want to prevent ice, simply press the Ice Maker Off button. However, you can also control this function in the Fridge Manager app. Models with SmartThings capability will control this setting in SmartThings. Models with dual ice makers will have an Ice Off icon on the ice maker, but only one button to control them both. Continue to tap the icon repeatedly until neither icon is lit. Ice Maker On or Off button Ice maker button internal panel There is a Test button on Samsung ice makers. (Most models will require you to remove the ice bucket to view the ice maker.) Once you find this button: Press and hold the Test button until you hear a chime (which may take up to 10 seconds). If the ice maker does not chime, power cycle the fridge for 2 minutes by unplugging it or turning it off at the circuit breaker, and then try again. Note: If an error code appears after power cycling, check our fridge error code guide, as the fridge may require service without any further troubleshooting. If the test button does not make the ice maker chime after power cycling, look and listen for movement and sound from the ice maker. If it appears to be doing something, continue troubleshooting. Otherwise, if you're certain you are pushing the test button correctly but the ice maker does not react in any way, visit our Support Center to request service. The test takes about 6 minutes on an ice maker in the fridge compartment, or about 30 seconds for an ice maker in the freezer compartment. Watch the ice maker move, and at the end the water valve should hum and pour water into the ice maker. If the ice maker dispensed water at the end of the test, skip to step 7. The RS27T and RS22T models have two water lines to connect. If they are cross-connected, the water and ice dispensing functions will not work correctly. If you have one of these models and the dispenser has not worked since installation, check these lines. You can skip this step if you saw or heard the ice maker dispense water at the end of the test in the previous step. If your water pressure is too low, your ice maker will not be able to make ice. Choose from the following sections for the method to check your water line was adjusted (this includes if you had to fully open your water supply valve as part of troubleshooting), then confirm your water pressure is 20 psi before continuing. We recommend contacting a plumber for assistance. Service is not required and no further troubleshooting is needed until the water supply is confirmed to be at least 20 psi. Then confirm your water pressure is 20 psi before continuing. We recommend contacting a plumber for assistance. Service is not required and no further troubleshooting is needed until the water supply is confirmed to be at least 20 psi. Your water line should have enough pressure to fill 6 ounces (or 3/4 cup) in less than 10 seconds. Dispense water into a measuring cup to confirm the amount. If no water dispenses at all, verify that the water line is connected. See more troubleshooting in our guide. If the cup was filled in less than 10 seconds, then you have sufficient water pressure and the test was successful. If the test failed, remove the water filter and try again. Second test (if needed): If the second test passes it is either low water pressure or an old filter that requires replacement. Replace the filter and then start the test again. (Use only Samsung brand filters.) If you're already using a new filter and the test is successful only when the filter is removed, then the water pressure is too low. If both the first and second tests fail, your water pressure is too low. If your water pressure is too low, make sure the home's water supply valve is fully open. If it wasn't already fully open, then this may have resolved your water pressure issue, so do the test all over again and see. First, make sure the home's water supply valve is fully open. If it wasn't already fully open, then this may have resolved your water pressure issue. In addition, has your water filter expired? Water filters that have exceeded their lifespan may reduce water pressure low enough that it impacts ice production. You'll need to judge for yourself if it's time for a filter replacement. Water filters are rated for 300 gallons of usage, which represents about 6 months of use in an average household. If it's been a while since replacing the filter, try removing it and checking if the ice production issue is resolved. If your water supply valve was already fully open and removing the filter fixes the production issue, then you need to replace the filter. Use only Samsung brand filters. Make sure the home's water supply valve is fully open. If it wasn't already fully open, then this may have resolved your water pressure issue. If you're using a Reverse Osmosis system to filter water, this may cause the water pressure to be too low. In this case, contact a plumber for assistance in assisting your ice maker's level. If it is not, water may not flow properly through the ice maker. Your ice maker works best when the fridge doors stay closed. Opening the door pauses ice production and allows warm air to enter the fridge, causing it to take longer to freeze ice. If you increase the cooling performance of your fridge, it should reduce the time it takes to freeze ice cubes. If your ice maker is creating ice and does not display an error code, then the refrigerator does not need service. You can use the above steps to help maximize your ice production. The minerals in your water are not harmful and are more common in areas with hard water. Small or shattered ice cubes in the least cube are caused by low water pressure. This occurs when the ice maker doesn't get enough water before it freezes and dumps ice into the bucket. The minimum required water pressure for the fridge is 20 psi. If your model has a dispenser, you can easily check the pressure by dispensing water for 10 seconds, and confirming you get at least 3/4 a cup. To increase your water pressure: Make sure your water supply valve is open all the way and that the water supply line is not pinched or kinked. If your model has a filter, remove it and check if the water pressure improves. (You can either use the dispenser or check the size of the next batch of ice.) If removing the filter fixes the water pressure issue, then your filter needs to be replaced. If the ice cubes are still small, even with a new filter, then contact a plumber for assistance in increasing your water pressure. It's not normal to see dark particles or flecks in your ice cubes. Dirty ice can be caused by an expired or damaged water filter, dirt in the water supply (which can occur if there was recent work done on the water lines in the home or neighborhood), or a damaged ice bucket. If the water supply has dirt in it, you can flush a few gallons through to clean it out. Contact your plumber if this doesn't work. Then, inspect the ice maker and its parts for any visible damage. Next, replace the water filter. If there is any visible damage, or the ice is still dirty after replacing the water filter, visit our support center to request service. When ice isn't being dispensed regularly, it can clump together in the ice bucket. Clumped ice may have trouble dispensing because it can get stuck in the chute. Also, clumped ice can cause the ice maker to think that the bucket is full, which causes the production to stop. Set aside time every other week to dump the ice out, so the ice maker can produce fresh ice. If your ice cubes are coming out slushy or frosty, the most likely cause is frost in your ice bucket. If you fix this issue, the ice cubes should return to normal. Do not attempt to defrost your ice maker, as this may damage the ice maker. Your ice maker has an automatic defrost function. If this is not working, then your ice maker needs service. Most ice buckets can be removed by pulling them straight out. Some models may need to be lifted up slightly before removing. If you aren't sure how to remove it, check your user manual to make sure you are removing it correctly. If the ice bucket can't be easily removed, it's more than likely frozen. If this happens, do not use force to remove it, or use anything such as a hair dryer to defrost it. Visit our Support Center to request service. Some ice makers are found in the freezer compartment instead of the refrigerator compartment. If a block of ice forms in the freezer compartment's ice bucket, clear the ice away and look for a white wire hanging down from the ice maker. If you see this wire, visit our Support Center to request service. If you don't see the wire, then it's possible the ice is from a spill in the ice bucket. Continue to use the refrigerator, and if another block of ice occurs, service is required. If your ice maker is frozen over with a sheet of ice, visit our Support Center to request service. For Family Hub refrigerators and other smart fridges that can connect to SmartThings, we have released a firmware update that can help prevent and possibly resolve this issue. Simply connect the fridge to SmartThings and the firmware will update itself. We recommend keeping your fridge connected to the app so it can receive the latest updates. Samsung refrigerator: Remove or install door and connect wiring harness This guide offers step-by-step instructions for removing and installing doors on Samsung refrigerators, including Side-by-Side, 4-Door Flex, 3-Door French, and top-freezer models. It covers essential steps for maintenance, door replacement, or installations, ensuring a smooth process. Detailed guidance includes disconnecting the wiring harness and Test or reset your Samsung ice maker Resetting your ice maker isn't something you'll typically need to do very often. In fact, the only time you should ever reset your ice maker is when you're not getting any ice, and even then, it's the last resort, after other troubleshooting steps which are more likely to resolve your issue. But if you want to check if your ice maker is working, it Reset Ice Maker: Top Freezer The Auto ice maker is located inside the top portion of your freezer and can be reset if it isn't producing any ice. Due to the way the ice maker is positioned, you will need to remove the ice bucket from underneath it before running the test. Thank you for your feedback! Your comment has been submitted. Test or reset your Samsung ice maker Resetting your ice maker isn't something you'll typically need to do very often. In fact, the only time you should ever reset the ice maker in your bottom freezer is when you're not getting any ice, and even then, it's the last resort, after other troubleshooting steps which are more likely to resolve your issue. But if you want to check if your ice maker is working, it Reset Ice Maker: Bottom freezer Resetting your ice maker isn't something you'll typically need to do very often. In fact, the only time you should ever reset the ice maker on the back of your freezer's door is when you're not getting any ice, and even then, it's the last resort, after other troubleshooting steps which are more likely to resolve your issue. But if you want to check if your ice maker is working, it Reset Ice Maker: Back of freezer door Resetting your ice maker isn't something you'll typically need to do very often. In fact, the only time you should ever reset the ice maker on the back of your freezer's door is when you're not getting any ice, and even then, it's the last resort, after other troubleshooting steps which are more likely to resolve your issue. Due to the way the ice maker is positioned, you will need to remove the ice bucket from underneath it before running the test. Winterize or prepare your fridge for long-term storage Winterize or prepare your fridge for long-term storage We know that refrigerators are meant to store food, but sometimes you may need to store it longer than you expect. Like when you're moving to a new place or when your vacation home will be unoccupied for a while. If you ever need to store your fridge or if it will be unused for a long period of time Thank you for your feedback! Your comment has been submitted. While supplies last for any then Eligible Model, and until this Promotion is terminated, whichever is earlier (the "Purchase Period"), Participants who complete all steps, including identifying your old TV to be traded in ("Qualifying Trade-In TV") and purchasing a then Eligible Model ("Qualifying Purchase"), will automatically at checkout receive a trade-in credit (the "Promotional Trade-In Credit") for use toward the purchase price for that Qualifying Purchase, only on Samsung.com or through the Shop Samsung App. The value of the Promotional Trade-In Credit will be set forth when you add the Eligible Model and this Promotion to your cart. Your Qualifying Trade-In TV must be ready for haul away at the time of delivery of your new Qualifying Purchase. ** Participants must pay all applicable taxes and delivery fees on the Qualifying Purchase. Such taxes and fees are all due at the time of sale. Full Terms apply. 1.For a limited time only, on Samsung.com/Shop Samsung App, or purchase a new qualifying Galaxy device ("Qualifying Purchase"), send in your qualifying trade-in device to Samsung through the Samsung Trade-In Program, and if Samsung determines your trade-in device meets all eligibility requirements, you will receive a trade-in credit specific to your qualifying trade-in device to apply toward your Qualifying Purchase. Device models that currently qualify for trade-in and trade-in credit amounts associated with those models are available on Samsung.com and the Shop Samsung App; eligible models and amounts may change at Samsung's sole discretion. To be eligible for trade-in, your qualifying device must meet all Trade-In Program eligibility requirements, which include, but are not limited to, that the device powers on, holds a charge, and does not power off unexpectedly; has a functioning display; has no breaks or cracks in the screen (unless a cracked screen offer applies); has no breaks or cracks in the case; has no liquid damage (whether visible or not); has no other defects that go beyond normal wear and tear; is not on a recall; and is not a Samsung Smart TV. The discount will be automatically applied at checkout as follows: (a) \$120 for Galaxy Buds3, Samsung Galaxy Buds3 Pro, or select Galaxy Accessories; or \$50 discount on Samsung Galaxy Buds3, Samsung Galaxy Buds3 Pro, or select Galaxy Accessories. Gift must be used at time of purchase towards purchasing additional products, while supplies last, on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, pre-order and purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App and receive a discount towards the purchase price of the Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App and receive a discount towards the purchase price of the Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase. If you return or cancel your purchase, the discount will be forfeit. 07/19/25-7/24/25, while supplies last, purchase a Samsung Galaxy Watch6 Classic or Samsung Galaxy Watch6 device ("Qualifying Purchase") on Samsung.com or in the Shop Samsung App. The Gift is non-transferable and limited to 1 per Qualifying Purchase.
