Samsung lithium ion battery datasheet

Item 項目	Rating 定格	Note 備考
2.1 Rated Capacity 定格容量	3000mAh	Discharge at 0.29A, 2.0V/cutoff after Standard Charge: 0.29A, 2.0V 截止放電での容量規格値。充電は標準充電
2.2 Maximum Charge Voltage 最大充電電圧	4.25V	
2.3 Cut Off Voltage 充電停止電圧	2.0V	
2.4 Continuous Maximum Charge Current 連続最大充電電流	5.0A	Continuous 連続
	6.0A	Pulse パルス
2.5 Continuous Maximum Discharge Current 連続最大放電電流	30A	(With 80 deg temperature cut) (温度カット 80℃以下)
	15A	(Without 80 deg temperature cut) (温度カットなし)
2.6 Allowable Environment Temperature 使用許容温度	Charge 充電	Refer to the cell temperature spec at 2.8 for cell surface temperature. セル表面温度に関しては 2.8のセル温度規格を参照のこと。
	Discharge 放電	
2.7 Weight 質量	46.6±1.5 g	

※ Cell condition at the shipment: About 75% discharged. セル: 出荷状態 約75%放電

Samsung lithium ion battery 18650 datasheet.

Battery Science & Technology & Battery Facilities Design & Engineering + Battery Parts + All Battery Materials + Battery Cells, Modules, Pack, Parts Production TRU Group Inc is a highly qualified team with experience in battery technology, disruption or conventional, battery technology, development, prototyping of cells/batteries, piloting, parts, battery assembly, battery production up to existing or new battery applications and uses. In Battery Science *Technology: our members of the battery team have decades of experience some working on the original lithium-ion batteries of the early 1990s. In fact, our President also worked on his first lithium assignment that year! TRU Group as a company was working in lithium batteries in the first 2000s and our battery technology experts today have several decades of experience in all chemical batteries - Lithium Cobalt Oxide; Lithium Manganese Oxide; Lithium Iron Phosphate; Lithium el el el Manganese Cobanise Oxide; Nick2; Ramum? Aluminiu Cobinum oxide; Amount? Rame? Rame? Nickluhm is Lithium Titanate. In Battery Facilities Design & Engineering: Our team includes battery professionals with exceptional activities and technical careers with the most prestigious battery manufacturers, including Panasonic, BYD, LG Chem, AESC, Mitsubishi, GS Yuasa, Samsung, Epwer, Beijing Pride Power, Air Litium (Lyoyang) and Wanxiang, on all types of batteries - special batteries for hybrid EVs, hybrid plugs and electric vehicles: we have highly qualified battery design- uh experts in battery engineering for other uses, including electrical tools, computers, mobile phones, robots, smart grid, ESS/ display / smart battery system, battery and wireless charging. TRU Group focuses on front-end engineering that acts like your Owner Team that the front-end engineering package for your state-of-the-art (automated) complete battery system, modules or cells for EVs, hybrids, hybrid plug-ins and electric vehicles. TRO TRO will provide detailed specifications for equipment based on its own competence and only then look for battery equipment suppliers (technologies). Important, we independently verify the performance requirements of the battery equipment and recommend customers on selection. Polypropylene ethylene Group customers in battery space include some of the most invested Western companies such as Advanced Metallurgical Group LSM, Materials & Electrochemical Research Corp, OM Group Inc, Mitsubishi Corporation, ExxonMobil, Resource Capital Funds USA, Sojitz Corp, Rio Tinto, POSCO, Lithium Americas, Rodinia Lithium, Chemtura and start-up battery. In 2021 he was committed to determining the possibility of a multimillion lithium-ion battery production plant in Indonesia. This Indonesian factory will produce nickel-based electric batteries, as well as cathode precursors and graphite anodes. Lithium ion batteries for energy storage ESS - wind, solar, industry and small scale - will also be evaluated for production. The focus will be on lithium-ion batteries using nickel-cobalt-manganese chemistries (NCM) and nickel-cobalto-aluminum (NCA). TRUTH The group will also evaluate conceptually cathode or cathode-based nickel precursor chemicals (nickel sulfate), and potentially other battery parts such as coated anode, cells or packs, should also be manufactured front-end to site. Full assignment includes front-end design and engineering, (FEED) using productive automated manufacturing. Washington State graphite coating production plant from mine through GSP fabrication for US TRU battery anodes The Group has completed a feasibility study for a spherical graphite processing plant, including integrated purification and coating plant. Production includes - coated spherical graphite for lithium ion battery rechargeable anodes >300 microns purified for flexible graphite and conversion of higher purified graphite powders
