(8) (1) Reply Amit Kumar (October 8, 2018) On the Gadget 360 recommends pro- 1.) FHD + display with fewer frames. 2.) The battery life is very good. 3.) Front camera is impressive with the potite mode. 4.) Face Recognition and fingerprint scanner. Cons: - 1.) HYBRID SIM-SLOT (SIM1 + SIM2 / SD card) 2.) Rear camera is average. I'm using this device since July and fully satisfied Redmi Note 5. The only problem I found is to suffer back camera in low light conditions. Rest is well. So I recommend people to buy Xiaomi Redmi note 5. Is this useful review? (4) Reply but Karveem (Mar 2, 2018) The 360 gadget recommends photo quality is very bad when zooming. For the more I use camera then call. And it upsets me. This review is useful? (7) (4) Reply Redmi Note 5 64 GB ROM and 4 GB of RAM Prishu Snehil (May 17, 2018) Gadget 360 My experience with this cell phone says that its not sharing the back up sign battery is not good in comparison with redmi note 4. and the negative point is the quality of the camera in a complex way. I would say that you can buy note redmi 4 64 gb portable is probably good. This review is useful? (3) Reply Chochu Anil (July 23, 2019) The Gadget 360 recommends Nice Smartphone Is this useful this review? (3) (2) Reply azim shaikh (June 19, 2018) The 360 gadgert now, this is a very disappointing and frustrating thing, my new # redminote device has left me! It was on the table and now only the light flashes white if you press the power button. Tried to press the power button for a long time, without luck, I also tried to press the power button + button volume for more than 60 seconds, yet the same. -> It seems he died! Check for replacement if possible. This review is useful? (1) Reply Samarth Arora (Apr 4, 2018) The 360 gadget recommends this phone to my brother. nice Although the quality of the camera is not a sign, but the processor is beautiful. This review is useful? Reply Dorothy CK (July 23, 2018) Gadget 360 The battery of this device lasts long enough. However the quality of the camera is not satisfactory. Stabilization and focus are missing. Extremely poor camera performance when using third-party applications. Phone Continue hanging after upgrade. This review is useful? Reply ABHIRAJ S (August 11, August, Warning: Can only detect less than 5000 characters"Additional settings A € ª,~" Developer options - Enable (s), OEM unlocking and (ii) Debugging USB.stip 1: unlock the bootloaderoxiaomi tightened the safety of their smartphones by blocking the bootloader, which keeps anyone flashing A personalized recovery, which is something necessary for the rooting of the device. To get the unlocked bootloader, fortunately, you can request the release code from Xiaomi but it requires a little patience as it may take a few days to get it. You can move forward to this web page to request the Code, simply fill the module that mentions the reason why you want to unlock the bootloader. You will get the bootloader unlock code in one or two days. ª, once you get the code you will have to wait at least 72 hours before unlocking the bootloader. It has passed that date, ª, you can download the release tool and unlock the bootloader. The second step is to flash the personalized recovery for your particular device, ª, this is difficult because you will have to download the specific twrp file for your device.stuep 2: download the requested files (a) ª, you will also need to install The custom TWRP for Redmi Note 5 Pro, where you are the link to download the TWRP for XIAOMI Redmi Note 5 Pro. (Rename the TWRP image file in TWRP.IMG for the ease of the tutorial) (B) Infinaly, download the Android cake files for Redmi Note 5 Pro.alt These files must be downloaded and moved to your mobile phone folder. Download Mokee OS to Redmi Note 5 Pro (Wherted) Download other rows to various corrections and WORKAROUNDSP-DP4-SGSI-AONNEELY.ZIP ª (Download and extract the image file) Post-SGSI 1 v0.11.zippost-SGSI 2 v0.14.zipost -sgsi 3.zipplag-fix.zipincall2.zipstep 3: Installing the customized recovery. It is different methods to flash the custom recovery, but what we would use is probably simpler and requires additional software called minimum ADB fastboot.download yourself They have downloaded and installed a minimum ADB, move the TWRP.IMG file, (downloaded to section A of step 2) to the minimum ADB folder in the program files, the file path is mentioned below.: Programs Minimal ADB FastBootSonce You're done with this, launches a minimum ADB F ASTBOOT and type this command. ª € ª,~ ª "FOUTBOOT FLASH Recovery TWRP.IMG ª € ª,~ ª" This collects the recovery image and loaded to the phone.Type this command. ª € ª,~ ª "FOUTBOOT BOOT TWRP.IMG ª € ª,~ (this will flash the image of Twrp ª recovery, on the phone, may take a few minutes) The TWRP would be flashing on your Xiaomi device. It was started in TWRP, touch ª € ª,~ ª "Wite ª, ª,~" then ª € ª,~ ª "Swipe a factory reset" ª €
