Pdf to excel password protected

A password protected PDF file can be useful for protecting sensitive content or limiting actions a user can carry out on the PDF. However, it can cause you a bit of hassle when you want to convert the PDF to Excel. This post will walk you through how to convert a password protected PDF to Excel, CSV or XML. Before we start I will be converting a sample PDF invoice which I have password protected. Step 1 Locate the PDF on your computer. Right click on it and click Open With then choose Google Chrome. Step 2 Once Google Chrome has loaded, enter the password for the PDF. Step 3 Next, right click on the PDF and select Print. Set the destination printer to Save as PDF and click Save. Step 4 You will now have the option to choose where to save the PDF. Choose a location and click Save. Step 5 The PDF no longer has password protection. You will now be able to convert your PDF to Excel, CSV or XML. To do this, take a look at our how-to page. Done! You've successfully removed password protection from your PDF and can now convert the PDF to Excel. Do you have more questions? Check out our other blog posts here or our FAQ page. Also, feel free to contact us. Love PDFTables? Leave us a review on our Trustpilot page! Icons made by Smashicons from www.flaticon.com is licensed by CC 3.0 BY How to add password protection to a PDF How to add password protection to a PDF Follow these easy steps to protect your PDF with a password: Click the Select a file button above, or drag and drop a PDF into the drop zone. Enter a password, then retype it to confirm the password. Download the protected PDF document, or sign in to share it. 02-28-2015, 07:25 AM #1 I am using excel to process salary. I have one sheet for Salary Data and other Sheet for Salary Slip. I am using Vlookup function for making salary slips. Right Now, I change one value (on which vlookup is based) and it gives the numbers related to that salary slip. Then, I save that salary slip in other file with a password and mail it to others. Now I basically need VBA for printing salary slip to pdf file with a password. I will be giving the password for each employee which will remain same for all times. And if possible I can directly mail the file to employee email using excel. Can you help me with this. Thanks Mohit Last edited by mohit1806; 03-06-2015 at 03:34 AM. 02-28-2015, 04:25 PM #2 Here are the steps:- 1. Download PDF Creator here:- 2. Install only PDF Creator with Compact Installation settings. Don't use Full installation as it would download other unnecessary parts. 3. Open PDF Creator --> Profile settings. You have to go through all visible tabs and change many settings to make it automated. a) Goto AutoSave section and Enable Auto Save option and Specify a path as well for auto save. b) Goto Action Tab and Uncheck all the option. (i.e. Open the Document and Open PDF files with PDF Architect. c) Goto PDF--> Security --> Set security parameters appropriately like setting passwords and other settings. Set a password for opening the File. 4. Now use the following code in your excel file to print PDFs. 5. It will create the Password protected Printouts automatically to a pre specified location using PDF creator. I have tested it and its working for me. Last edited by Vikas_Gautam; 03-01-2015 at 03:53 AM. Regards, Vikas Gautam Excel-buzz.blogspot.com Excel is not a matter of Experience, its a matter of Application. Say Thanks, Click * Add Reputation 03-01-2015, 04:34 AM #3 Thanks Vikas. But I want to have different passwords for different files and I have list of passwords in other excel file. Further while downloading pdf creator, chrome says malicious file. What to do? 03-01-2015, 05:24 AM #4 yes.. It did says while I downloaded. You can Goto Downloads and Click on the appropriate link to get it downloaded. For the new password for different file, I think I have to rethink about it. It will take some time. I will catch you soon. 03-01-2015, 10:26 AM #5 Is it possible to create different excel files instead of pdf files, but password protected. I actually need to mail those salary slips, but should be password protected. 03-01-2015, 02:57 PM #6 Hi Mohit, Finally, I have succeeded in making a Protected PDF Code. Here are some steps:- 1. Download PdRk (PDF toolkit) from the link below and Install. Download PDF Toolkit Actually, PDF toolkit provides Command line interface to make password protect pdfs. 2. Now Use the following code to Make Pdfs. Change oPdf and Password Variable Accordingly. You should provide your password list and explain that how you would like to generate PDFs. I have tested it and its working for me. Last edited by Vikas_Gautam; 03-02-2015 at 03:09 AM. 03-05-2015, 01:10 PM #7 Thanks Vikas. That was great. That worked for me too. Can you help me with more than one file to be saved in a click with different passwords. I have attached a dummy file. 1st worksheet - salary sheet. 2nd work sheet - salary slip - to be saved in pdf files. 3rd work sheet - contains file name to be saved as and respective password. Attached Files Dummy salary file.xlsx (25.3 KB, 320 views) Download Last edited by mohit1806; 03-05-2015 at 01:18 PM. 03-06-2015, 02:44 AM #8 I will be customizing the code as per your needs and let you know. Can you change the Thread Title to one I used in Post #6.? this way, this would help many others as well. 03-06-2015, 03:18 AM #9 Is the thread got changed? If not pls tell how to change. Last edited by mohit1806; 03-06-2015 at 03:23 AM. 03-06-2015, 04:15 AM #10 Okay, Use the drop downs in the sheet1 and click the button to Generate Password protected salary slips. I have eliminated MsgBox. Instead I have used Status Bar to show the progress. That will definitely reduce your clicks. So keep an eye on the Left bottom. Here is the amended code:- HTML Code: Dim fTemp As String 'Defining Variables Dim oPdf As String Dim Pwd As String Dim fPath As String Dim nFnd 'First Name to be searched for. Dim RowNum Sub PwdProPDFs() On Error GoTo ErrHandler 'Turning ErrHandler On. Application.StatusBar = "Generating Salary Slip, Please Wait..." Application.ScreenUpdating = False Application.DisplayAlerts = False fTemp = ThisWorkbook.Path & "\ & "Temp.Pdf" fPath = "D:\"
