Used by thousands of students across the world after the publication, Mechanics of Materials provides a clear presentation of the object illustrated with numerous examples of engineering students is to understand and relate to the theory and application. The tried and true method for material gives students the best opportunity to be successful in this course. From the detailed examples, problems at home, the solutions developed with care manuals, teachers and students can be sure the material is clearly explained and accounted for properly. McGraw-Hill Education! e s Connect. is also available as an option to add on the subject. Connect is the only integrated learning system that authorizes students continuously adapting to deliver exactly what they need, when they need it, as they need it, so that class time is more effective. Connect allows the professor to assign homework, quizzes and simple and automatic test grades and records Studenta e s work scores. The problems are randomized to prevent the sharing of feedback may also have a solution! e A e multi-step, which helps move Long students e If they experience difficulty. Born in France and polite in France and Switzerland, Ferdinand Beer held a M.S. Degree from Sorbonne and a SC.D. Degree in theoretical mechanical mechanics The Geneva University. She came to the United States after serving in the French army during the first part of World War II and taught for four years at Williams College in Williams-Mit Joint Arts and Engineering Program. After his service at Williams College, beer enraged at the Faculty of Lehigh University, where she taught for thirty-seven years. You held different positions, including the university distinguished professors president and president of mechanical engineering and mechanical department. In 1995, beer was awarded a Doctor Honoris Degree in Mechanical Engineering for the Lehigh University of Materials with Beer and Johnston for the degree mechanics of the courses of materials in mechanics, civil, and departments of aerospace engineering. Containing Hibbler! e s characteristic student-oriented features, this text is in four colors with a photorealistic art program designed to help you view difficult concepts students. A light and concise writing style and more examples of any other text further contribute to capacity students e to master the material. This edition is available with MasteringEngineering, an innovative online program created to emulate the instructor! e s environment now officea, guide students through engineering concepts from mechanical materials with individualized self-learning coaching. Distributed uniformly in 38 chapters, it focuses important are laid on stresses, strains, inertia, strength, beams, joints and shells among others. Each chapter contains numerous examples solved supported by chapter-end exercises and questions that help the understanding of the concepts explained. A book that has seen, expected and changes in the subject for almost 50 years embedded, continues to be one of the most refined texts by the students for all aspects of the subject. Main features: 38 chapters provide in-depth coverage of every important concept in the subject. Close to 1250 examples, figures and tables aid to the concepts explained. Close to 700 in-text Questions for exercises and chapter-end questions Add to student practice. He completed his education in Sunam him and then he completed his professional studies from Phagwara and Delhi. He began his career in his department of Punjab irrigation engineer. After driving by Professor Das Chandigarh Engineering College, Dr. Khurmi came to Delhi and took over the teaching and writing of engineering textbooks as a full time career. He had a great respect for him, his Guru Shri B.L. Theraja, presenting it at S. Chand and Company. Books about him have got a good market, not only in India but also abroad. According to the UNESCO survey, he is the principal, and n. 1 Author of engineering textbooks in Asia. He wrote his first book when he was only 26 years old. The people in the teaching profession always refer Khurmi that has revolutionized the way of writing of engineering textbooks. A He was a founding member of the Executive Committee of the Afro-Asian Book Council.
