December 20, 2022 Version 8.16.1 Want to use different playback speeds for audiobooks? The player will now use the last selected speed. Not sure if you entered the correct password? Use the new password visibility option to check your accuracy. Fixed an issue where history was not correct on all devices. First of all, I love the content of this app and appreciate the developers who made it a reality, so I hope that the low rating and subsequent announcements will only help the platform grow. My biggest complaint is how painful it is to switch between devices. I want to pick up where I left off on my iPad when I switch to my MacBook and then back. I'm thankful that history seems to sync (mostly), but in the intended scenario, I usually have to search through a book to find where I've been on the other device. The irony is that the highlight seems so clear that the location does too. Also (another big problem) I like to have multiple books.Work your way through, but you'll often open a number of other books for reference throughout the day. This led to complete disaster in my story. It would be nice to have more books pinned at the top of the history view, or at least have filtering and sorting options so those books don't get lost in the shuffle. Of course, you can delete the rest, but then you lose the impression that you mentioned the book earlier, so that's only half the solution to the unresolved problem. When I first faced layoffs more than a quarter of a century ago, I realized that I knew absolutely nothing about the market. I vowed never to be in that situation again and made it a habit to read one textbook a month. It cost me $40-$50, but it was worth it. As with programming skills, the problem with reference books is that knowledge rots. Every few years you need to brush up on the tools you already know and learn new skills. Worse, a new project at work can figure out which books to buy. There is no time to research, no time to shop or wait for a book. internet time! I discovered O'Reilly ten years ago. thousands of books. Again and again. Preprints of unpublished books. Paradise! New project? Read 2-3 books and read the most important chapters. New technology? Read the introduction and then pick an intermediate book that grabs your attention. Update? Read the latest version of a classic book about your favorite technology. Online courses and special streaming events? Bonus. If you're an employer and you haven't bought this for your employers, hang your head in shame for 10 minutes, fix it. If you're a techie, don't rely on your employer - get your own subscription and your reading lists will never expire. Do what I did and take responsibility for your own education. I do not recommend using the app at all. The app used to be an extension of the web where you could easily find what you needed.off. Now only Trending, Upcoming Meetings, Recommended for You and Recently Added are available. There is no history of what you read or watched online. There is a playlist tab, but this is a poor substitute for browsing history*, as it means that users who frequently search for several different technologies now have to save each result to a playlist. If you are lucky enough to work with only one domain and it uses modern technologies, the application may be suitable. But to anyone who has used O'Reilly Media as a technical reference library, I would suggest you save yourself the time and trouble and skip this app. *- The history feature also doesn't work in the web interface, so I'm not sure if their educational platform as a whole is worth the money. It's been broken for a few months and I think that's a pretty telling sign. Here is a media company whose main focus is publishing technical literature with a focus on software development. Websites and apps are being developed in this area - and these are the products they are releasing. An app that basically says nothing but Google and a website that only half works. Perhaps the developers should read some of the books included in the learning platform... The developer, O'Reilly Media, Inc., has stated that the privacy policy of the application may include data processing as described below. Please see the developer's privacy policy for more information. The following data may be collected and associated with your identity: Contact information User-generated content Search history Identifiers Usage data The following data may be collected but not associated with your identity: Privacy policies may differ, for example, depending on the feature you use or your age . . More Information Developer Website Application Support Privacy Policy July 25, 2012 06:00 AM EST SEBASTOPOL, CA -- (BUSINESS WIRE) -- Safari® Books Online (www.safaribooksonline.com), an on-demand digital learning library forDigital media and business professionals today announced their next generation Safari To Go, a free app designed specifically for Apple and Android phone and tablet users. The new apps are more than the "mobile" version of Safari Books Online. They allow users to access and manage content and view it in a familiar and comfortable environment from a mobile device. Safari To Go apps make learning on the go easy and convenient, allowing users to pick up where they left off on any Safari Books online reading platform. This means that the user can go to Safari Books Online, start a reading session on their computer, and simply pick up where they left off on their iPhone, iPad, Android phone or Android tablet. The Safari To Go application can be downloaded from the Apple App Store 8.link: and Google Play [link: for owners of Android devices. Safari To Go apps for iOS and Android have the following features: Offline book capacity has been increased to allow you to download 3 books for reading without an internet connection. Recent views, bookmarks and folders are synced across all devices used to access Safari Books Online 3G and 4G Optimized for faster load times and data overhead Adaptive streaming for optimal video playback based on available bandwidth Updated user interface makes Folder, content and search navigation made easy New 'Browse' feature helps you find books and videos in different categories and interests Grouped tabs by title keep key content better organized Smart Lists let you save your searches and keep track of new titles related to your search results (which are automatically updated as new titles are added to the library) "We are very excited to bring long-awaited apps for iPhone, Android phones and tablets for Android along with a redesigned app application for the iPad," said Bill Levien, Mobile Product Manager, Safari Books Online. "We wanted userswill be able to quickly find the content they are interested in when they have few precious moments to read. We also wanted to provide a reading experience for reading marathons and enable cross-device syncing so users can quickly pick up where they left off, regardless of which device they use to access Safari Books Online.
