

I'm not a bot

3352 To listen to or control playback of a disc in your system, be sure the correct disc is selected. To select a disc, press the CD button on the remote control until d2 (disc 2), d3 (disc 3) or d4 (disc 4) appears on the system display. Determine if the CDs play or not. If the CDs do not play, see CDs skip or do not play. Much like rebooting a smartphone, your product might need to be reset on occasion to correct minor issues. For more info, see Resetting your product. In some cases the shock absorbing grommets used beneath the CD mech may come loose. The disc may not eject in this situation because it is obstructed by the faceplate. Turning it upside down may align the two components and allow the disc to come free. Whether or not the disc ejects, the system should be serviced to prevent this from happening again. Follow the link for more information on how to service your product. Depending on your product and region, you will be provided a contact number or the ability to setup service online. Click here to start service. If the steps provided do not resolve your issue, your product may need service. Follow the link below for more information on how to service your product. Pakistan Embassy Washington, D.C. cd on cd image by Stephen Kirkby from Fotolia.com Though aftermarket CD players are popular with many car owners because they offer increased technology and specialized features, some factory players also fit the bill for a number of reasons. Bose factory-installed players are popular because of their easy interface and advanced sound, but discs can sometimes get stuck inside the player. There are some steps you can take to dislodge your CD from the Bose player without ruining either. Press and hold the "Power" button on your Bose for up to three minutes to allow the system to force the disc out of the player. Press and hold the "Power" button as you cycle the key in the ignition from the "Off" to the "On" position a few times, attempting to power the system up and down to eject the disc. Insert a disc into your player beneath the stuck CD and attempt to push the disc up into the ejecting track. Insert and push with the extra disc and hold the "Eject" button. 3352 Determine if the CDs play or not. If the CDs do not play, see CDs skip or do not play. I'm shocked but the "Shaking it" suggestion actually worked! Here's what I did: Unplugged power and any output cables. Turned the unit upside down. Dropped it from an inch or two onto carpet. I didn't plan on fixing the unit today I was just dusting it off and removing it from its shelf so I could dust that. When I powered on again the Bose made its normal CD mechanism noises but about 1/4" of the CD came out so I grabbed it and out it came! NOTE: I haven't tried inserting/playing a CD! I have the external 3 CD player from Bose (which is working fine) So for now I just won't play CD's directly from the Bose Wave Radio. NOTE 2: :-) My curiosity got to me. Currently I can insert, play, eject, a CD from the main player.
