## How to make an auto clicker macro corsair

iCue saves profile info in %APPDATA%\Corsair\CUE. How do you save Corsair iCUE profiles? Export an iCUE profile Open iCUE. Select the device that you want to export the profile of. Find the profile you want to export on the left side of the screen. Click the Menu button (appears as three horizontal lines). Click the Import/Export button. Click the EXPORT tab in the IMPORT/EXPORT PROFILE section. Click the Export button. Where are Corsair macros saved? The answer is very easy: macros are not saved into the device's memory. They only work when CUE is active. How do I program a macro key? How do I create macros? Using the mouse that you want to configure, start Microsoft Mouse and Keyboard Center. In the list under the button that you want to reassign, select Macro. Click Create a new Macro. In the Name box, type the name of the new macro. Click in Editor, and enter your macro. How do I set up macros on Corsair scimitar? Create a macro Open iCUE. Select your Scimitar RGB Elite in iCUE. Click the + button in the ACTIONS tab. Click the dropdown menu at the bottom of the screen and select MACRO. Click the record button (the button with the red circle) to begin recording your macro. Input the contents of your macro. How do I setup my Corsair RGB mouse? Assigning Mouse Buttons with iCUE Download iCUE. Open iCUE. Click the Home menu. Click the icon for the mouse you wish to configure under "Devices." Click the Actions menu on the left to expand. Click the + button on the Actions menu. From the center drop-down menu, change "MACRO" to "A-Z KEYS" under "REMAP." Click the circle next to "P." How do I setup my Corsair iCUE Mouse? Configuring your Scimitar mouse's side buttons Download iCUE. Install the software, following the wizard. Open up iCUE. Select your mouse on the right. Hit "Actions" on the left panel. Choose the buttons on the right-hand side and select an action for each of the G keys. How do I make my Corsair harpoon discoverable? In order to get the mouse into pairing mode you need to turn it off and then hold down the DPI Cycle Button and while holding it down, put it into bluetooth mode. The LED indicator should continue to flash, showing that the mouse is in bluetooth pairing mode. How do you connect iron claw Bluetooth? First is to turn on Bluetooth on your PC and initiate Bluetooth pairing mode. Then on the Ironclaw, hold the Profile Up button and switch the Ironclaw to Bluetooth (turning on the mouse at the same time). Do not let go of the Profile Up button as you switch to Bluetooth connection. How much does the Corsair ironclaw wireless weight? 0.3 pounds How big is the Corsair ironclaw? 5.1 x 3.2 x 1.8 inches How do you use the sniper button in Corsair ironclaw? On the Iron Claw, the Sniper button is referred to as "Option" in the menus. In the DPI section, you should be able to designate what speed you want for that button or if you want it to be a "sniper DPI shift" at all. It can be reprogrammed to do other things. This is done in the Actions Tab. Where is the Sniper button on Corsair ironclaw? On the Iron Claw, the Sniper button is referred to as "Option" in the menus. In the DPI section, you should be able to designate what speed you want for that button or if you want it to be a "sniper DPI shift" at all. Is using a corsair macro button considered botting? I know for a fact that if I click the little repeat button and just walk away from my computer while it does things for me indefinitely IS botting. I'm more interested in playing 2 accounts at once and setting up the keyboard macro to do the following alt+tab to the second account click the screen move mouse down (so my character is looking straight down) release click moving the mouse again right click alt+tab back to my main screen. It would only do this once, per button press. Basically a macro to automate looting on the account that's following the main. I wouldn't be leaving the computer and I would still be in control of everything. I don't know how the system detects bots so one account will be doing the exact same motions over and over and over so it may appear to be botting even though I am controlling those motions with a button press. If you mean that your macro is going to do all those things in succession, then I'd recommend against it. Personally, I wouldn't recommend using any out of game macros. You shouldn't be doing anything that you couldn't also program with the in-game macro feature. One button click should only create one action per character per account. That's how to keep within the rules. You might want to try checking out some multiboxing sites to see if others have any advice when it comes to looting etc. While multiboxing isn't against the rules, it's completely unsupported. Oh, and you're 100% right about not using any repeaters 2 Likes Per! If you mean that your macro is going to do all those things in succession, then I'd recommend against it. Alright fine... would have only saved me like 2 seconds of moving my fingers to alt tab, clicking and alt tabbing back. Not worth the chance of being banned for that little of a gain in time =P Change your system settings on your mouse to allow in game overlay to the other open instances of wow. It will appear on your screen like the discord overlay that way all characters open in all instances of wow will move to your mouses commands. Set abilities to hotkeys on your mouse and bam you are good to go Here is a solid rule of thumb. Can you create the macro with the in game macro system? If so, do so and keybind it to one of those buttons. If not, avoid it as it can get you suspended. We have seen it happen before 2 Likes Sniffed: Change your system settings on your mouse to allow in game overlay to the other open instances of wow. I can't find an overlay option like that in windows 10 settings or wow settings. What mouse do you have? I use razor naga and have razer synapses installed. So I open control panel in windows, programs, razor, options, enable in game overlay. Then change wow launch folders to wow1, wow2, wow3 ect ect based on how many you mb at a time. Then enable overlay for those instances of wow. Hope that helps and not too big a wall of text. If you need more help join the mb discord link is in the reddit thread 1 Like Sniffed: I use razor naga and have razer synapses installed. lol idk some pos that came with my computer, no fancy programs with it. i might be stealing my wifes razor now => It sounds like you want to do a poor man's multiboxing. "Real" Multiboxing requires special software and essentially runs WoW (or whatever program) in multiple independent sandbox instances that each think they are a real PC. Nearly all Multibox software includes options to do keyboard and mouse propagation. There is 1 person at the keyboard/mouse and his 1 keyboard strike or mouse click is automatically propagated into all instances at the exact same time and exact same screen location. Blizz has declared that to be legal on many occasions. This is why you will see an army of druids flying around picking herbs all moving synchronized. When 1 picks the flower, they all pick. It will look a little bit disjointed and maybe even "bot like" because normal players don't move like that small army but randomness does happen and a rock that trips up just 1 guy in the army and not others will force the multiboxer to click "funny" to resync. Side Note: multiboxing is legitimately done for quality assurance testing of many different programs to simulate many, many users doing the same things at the same time. While Multiboxing is legal. Your poor man's version may not be. Blizz takes a dim view to macros like that despite the fact that you're basically doing what real multibox software does. Good place to start: by Tashreef Shareef Windows & Software Expert Tashreef Shareef is a software developer turned tech writer. Fix PC issues and remove viruses now in 3 easy steps: Download Restoro PC Repair Tool that comes with Patented Technologies (patent available here). Click Start Scan to find Windows issues that could be causing PC problems. Click Repair All to fix issues affecting your computer's security and performance Restoro has been downloaded by 0 readers this month. Corsair makes some of the best gaming peripherals, including gaming mice. Corsair mouse consists of multiple side buttons that allow the gamer to customize the action based on their requirements. However, recently several users have reported the Corsair mouse side buttons not working issue. Your Corsair mouse side buttons may stop working due to several reasons. Incorrect button assignment, malfunctioning Corsair software, and hardware failure are some of the reasons. Today, we take a look at a few working solutions to help you fix the Corsair mouse side buttons not working problem in games and other applications such as GeForce Now. How do I fix the Corsair mouse side buttons not working? 1. Update device drivers Outdated and missing device drivers can cause Corsair mice to malfunction. If you have recently installed a Windows update, some mouse functionalities may stop working due to pending updates. While you can manually update your mouse driver from the Device Manager, it can be cumbersome to update multiple device drivers manually. Third-party software updater utilities like DriverFix can automate this process and make installing driver updates easy. Some of the most common Windows errors and bugs are a result of old or incompatible drivers. The lack of an up-to-date system can lead to lag, system errors or even BSODs. To avoid these types of problems, you can use an automatic tool that will find, download, and install the right driver version on your Windows PC in just a couple of clicks, and we strongly recommend DriverFix. Here's how to do it: Download and install DriverFix. Launch the application. Wait for DriverFix to detect all your faulty drivers. The software will now show you all the drivers that have issues, and you just need to select the ones you'd liked fixed. Wait for DriverFix to download and install the newest drivers. Restart your PC for the changes to take effect. Drivers will no longer create any problems if you download and use this powerful software today. Disclaimer: this program needs to be upgraded from the free version in order to perform some specific actions. 2. Check if iCUE is running iCUE is a proprietary tool for Corsair that manages the customization of its peripheral devices, including the mouse. If the side button on your Corsair mouse is not working, make sure iCUE runs in the background. Right-click on the taskbar and open Task Manager. Check if the iCUE process is running. If not, relaunch the tool and let it run in the background. Check if the side buttons work now with iCUE running. Run a PC Scan with Restoro Repair Tool to find errors causing security problems and slowdowns. After the scan is complete, the repair process will replace damaged files with fresh Windows files and components. If the issue persists, repair iCUE from the Control Panel. It comes with a built-in repair tool to find and fix issues preventing the software from working. Launch the iCUE app. Open the Settings tab. Under Device Settings, select your Corsair mouse. Click the Clear onboard storage button for Device Memory. Click Yes to confirm the action. Clearing the onboard storage will delete all profiles from the device's memory. Once cleared, Leave your custom profile as the only option and reboot the computer. Make sure to delete all the default profiles available to resolve the issue. 4. Remap the side button Launch iCUE. Under Device, choose your Mouse. Click the + icon in Actions to add action. Click the Macro drop-down menu and choose Remap Mouse Button. In the Mouse Button settings, choose the action that you want the side buttons to perform. Choose the same action from the predefined actions tab. Open the Advanced tab and check the Retain original key output. Do this for all the actions that you want to assign to your side buttons. Close iCUE and check if the Corsair mouse side button not working issue is resolved. 5. Repair iCUE Delete Corsair composite virtual input device Open Device Manager. In Device Manager, expand the Human Interface Devices. Right-click on Corsair composite virtual input device and Uninstall device. Check the Delete the driver software for this device box and click Uninstall. Once the driver is deleted, you can proceed with the repair process. However, before repairing iCUE, it is important to Corsair composite virtual input device driver. Repair iCUE Press the Windows key + R to open Run. Type control and click OK to open the Control Panel. Click on Uninstall a Program under the Programs section. Locate and select the iCUE software from the list of installed apps. Click the Uninstall button and then click Yes to confirm the action. In the iCUE software setup screen, click on the Repair option. Click Next and wait for the tool to scan and repair any issues with the software. If the Repair option is not available, rerun the installation file for iCUE and choose Repair from the setup screen. Once the repair is complete, reboot your PC and check if the macros and remaps are working. 6. Uninstall your Corsair mouse driver Press the Windows key + R to open Run. Type devmgmt.msc and click OK to open Device Manager. In the Device Manager, expand the Mice and other pointing devices section. Right-click on your Corsair mouse device in the list (if you have more than one pointing device connected) and choose Uninstall Device. When the Uninstall Device prompt appears, click the Uninstall button to confirm the action. This will uninstall the Corsair mouse installed on your PC. Once uninstalled, restart your computer. Make sure the mouse is connected to your PC during the restart. After the restart, Windows will detect and reinstall the device. Reinstalling the Corsair mouse seems to have fixed the Corsair mouse side buttons not working issues for many users. On PCs with new Windows updates, a quick uninstall has resolved the issue for many. The Corsair mouse side buttons not working issue in Windows can occur due to onboard profile conflict or incorrect button mapping. Additionally, reinstall the mouse device, and repairing the iCUE software can help you fix the issue quickly. Follow the steps and let us know which method helped you resolve the issue in the comments.
