COOPERATION MODEL

- Implementation – individual scoring
- Final scoring after agreed amount of free records gathered with minimum 10% of unpaid on time loans
- Cost – 3000 EUR instalation fee, 1,5 EUR per single score.

Best formation on score match. Score match best formation 2021.

Because the combination between architect & a \* az à € TIC \* hammer is simply unstoppable! À À à¼ à jixones. à, -à, - To use the space of the defense of the opponent. With this formation, our possession of the ball would be really high, sometimes as high as 80%... Many times, opponents cannot be patient enough to maintain organized defense. I have not been prepared! We admit that 3-5-2 is vulnerable to counterattacks! So that you do not receive against the counterattacks, you must hold the ball using the guard, safely the attack with a gunshot step to the players in a good position if you can not find anyone to pass, move to the opponent GK in its place, if you cannot find anyone to pass, kick the ball out of the country, we, we are vulnerable to crossing passes, especially when the opponent has a high striker as bulldozer ... The only solution is to exercise as much pressure as possible at the end of the opponent so that he cannot make a high crossing pass To the striker! This is how we can do! You have dominated the foundations of the updates of the application 3-5-2a \* Basics to ensure a victory against the rivals! If you are someone who loves the idea of possession, definitively I recommend this formation! That is why we need it in the center to carry this possession ferbol to a higher level! When I can't find out what to pass, just move to the guard. When the opponent is a teacher in long counter tabs with formations such as 4-3-3, it is crucial Speedster is the most poured player in normal players, so he must be chosen for Centerback to deal with the opponent strikers, such as Jet! À à¼ à jixones. à, -à, - to prevent the opponent's winged player from making a cross pass. I have to admit that this 3-5-2 formation surely has a point of Bil ... The point of Bil is that we do not have high central backups and it is very difficult to deal with high players like Hammer. What will we deal with difficulty? If you decide to use a short corner, it can be passed to the producer or the explorer! Well, forget about telling you, Reoming Architect for Set Piece Kicker! There are no formations that do not have weaknesses, and 3-5-2 is not an exception. In general, the best movement is to make a raised pass to Hammer ... However, if the opponent's defender is better in the battle, it is simply impossible to write down that way! To illustrate how to make opportunities for objectives in this case! The answer is to use a short corner! Passes to the intruder -ventruder intruder arrives at more than the ball that the defense using his speed! Relating with patience to hold a ball, looking for a goal chance! How do we know if we must use short corners or not? It will ensure that we do not lose the ball and receive against the counterattacks. Well, you can look at your profile or remember the average level of opponent players. Make the short corner This is to provide a high quality jerk to the hammer, sprinter and a merode! The most important goal to cross the pass is obviously a hammer, but I will explain about this later ... also, they are good in The ball using dribbling. In last instance, we want to create a situation in which Architect can possess the ball in a position in which he can send a cross pass to the hammer. This is the basic way to write down from this 3-5-2 formation! Next, I would see how to attack from the left side! At the same as the right side attack, the left lateral attack begins from the lateral midfielder! You can start the attack when the producer can keep the ball in a position high enough without committing the risk of losing it! In general, the producer has to go to the hammer below. CLOSED CLOSED! À Use for counterattacks. I just check your statistics! The tapestry is clearly the best. Intruder is really excellent for using the space of the defense of the opponent, especially when the defense of the opponent becomes a bit messy! It is really pushed, and the opponent will regret having been hospitalized after granting intruder goals! Finally teaching you how to write down with 3-5-2! We are westically supporting the ball using the four midfielders, producer, guardx2 and architect! However, we have to be careful, not receive counterattacks! That is why we put two guards in the center as explained before. Otherwise, it will be ahead of counterattacks! However, sometimes we cannot go to our favorite risk makers. Here is advice! As shown in the image, when you pass to the players who are not reliable, such as the intruder, I just have to move down with the pass! This can create unpredictability in its movement in good sense, and I promise that the defense cannot take away the ball so easily! Then make the intruder pass reliable players like Guard, etc. Then the hammer has three Again, go to the guard or architect and change the attack on the right side of Opcion 1 is an ideal movement, but if it is not possible, we can hold the ball with option 2 or 3. Continuing passing the ball from side to side, the The opponent's defense will begin to become a disaster! That is when we can finally take risky measures to write down! Also, obviously, it's good in defense! À à¼ à jixixes to provide high quality crossing to the strikers. One of the most important positions in this 3-5-2 formation are the lateral midfielders! We have technical players in those positions. Puntage! Match is a fun game that you can play on milstun devices! "However ... they can have problems like ... do you know how much and it is really frustrating! I understand everyone! In fact, I have been there, you can understand the concepts of Sicos and the special advice to master the formation 3-5-2 powerful to write down 3-5-2! More high! -2! I do not have intruder or speedster, you can use infiltrator I do not have a locking, you can use the engine in its place! You have no architect, you can use the producer instead! I do not have a hammer, it is well to use threat! I will explain more about the players and why they are located in their positions! À à¼ à¼ à could it "€" because it grants much less goals than others, obviously! "In my opinion, it makes no sense À¼ccionosa to use it as a second striker, which obtains the intersection of land! To place itself near the target, therefore, if you put it in the position of attacker midfielder, it can convert 3-5-2 into 3-4-3! àgn Hammercrossing Hammerintruder or Merodeo sessions! This is a very easy way to score goals from the beginning! The lateral attack is something important in this 3-5-2, but we can also score many goals from the central attack! À "... The key is the intruder! The land cross pass from the base of producers was through the ball of the architecture based on the ball of the guard or the merodeter, this type of pass can create a great goal chance for intruders for intruders ! Avance! As always, keep in mind that the ball passes to the players who are reliable. Well, let's let the opponent make a cross pass! To prevent the crossing from reaching the high strikers of the opponent, our lateral ones have to be rose! In addition, it is also good to attack! À à¼ à¼ jixixesses à à, -à, - to send the ball from the left side to the right side, and on the other side! On the ball from side to side with short passes! The guard only chooses safe actions. behavior.
