You can move your details to a new Android phone from another type of phone or start cool with your new Android phone. Switch from an Android phone turn on your new phone. Tap Start. If you don't see Ã ¢ â,¬ Å "Start, Ã ¢ â,¬" you can copy your data manually. When prompted, choose to copy apps and data from your old phone. If you have a cable to connect phones, Follow the on-screen instructions to copy your data. If you don't have a cable: Do you touch any cable? OK. Touch a backup from an Android phone. To copy your data, follow the instructions on the screen. Switch from an iPhone turn on your own New phone. Tap Start. When prompted, choose to copy apps and data from your old phone. If you have a cable to connect phones, follow the instructions on the screen to copy your data. If you don't have a cable: Touch No cable? ok. Touch a device for iPhone. To copy your data, follow the instructions on the screen. To synchronize with your new phone, back up your iPhone account and iCloud on Google Drive. Find out how to back up data iPhone with Google Drive. To make sure you can get you STI on your new phone, learn how to switch from Imessages to messages. Restore data from the important cloud: if you don't have your old phone, you need to know your Google account and password to restore some data. Turn on your new phone. Tap Start. To configure the phone without an old phone, follow the prompts. When prompted, log in with your Google account.Ã ¢ If you can't log in, learn how to recover your account. Copy the data manually important: the options above will help you restore most of the data. If none of the other steps works for you, try copying your data alone. Synchronize your contacts: Copy your music: Music Buy from Google Play or YouTube Music will be automatically displayed on your phone after logging in. Backup of your music from your current phone to your computer. So, use your Chrome browser to drag songs to your Google Play library. Find out how to add music using Google Play Music for Chrome. Copy photos, videos, files and folders: Copy calendar events: Tip: If your new phone is a pixel or Nexus, view our pixel configuration guide or the Nexus Installation Guide. Configure e-mail Set the Messaging Download and use Apps Robert Triggs / Android AuthorityGot a new phone? While this can be really exciting, having to spend the phones it can also be a complete pain. Not only do you need to make sure all your data is executed the â € Google> Backup. Keep in mind that the procedure could be slightly different, depending on the phone you have. Backups take place automatically in the background, but can be manually started on Android phones by simply pressing the Run Backup button now. Read near: How to back up your phoneby Android go to this path, when you enter the installation process on a new Android phone, Google should offer the possibility to restore all these data from the cloud. Just select the last backup, and the laptop manage the actual actual copy job Important Tip: You can't restore a backup from a more recent Android version on a phone running a version of Android more This means that you can't restore an Android phone from 11 to 10 an older Android phone: the process assumes youÃ ¢ King always the update. But if this is a problem, you should be able to update the Android 10 phone before. It's just going to get some time. Option 2: ADB Backup One of the less known backup methods is recommended only for power users and developers using Google's Android Bridge (ADB) tools. You can back up most data on the phone, such as applications as well as installed. The backup file is also saved saved The computer accessible at any time or restored on any Android device. This gives you more inspection on backup options and allows you the same phones as a multiple phones right away. But, as this process involves the use of Google developer tools, we will only have only using this option if you have a previous experience using ADB or, OK, go well slowly and cautiously on your trip. To start, you need to download and configure the Android SDK on your computer. First, enable developer options and USB debugging on your smartphone. Then connect it to the computer and make sure the ADB works properly. Type and perform ADB -APK -Shared backup -All -F /backup.ab in the terminal or command prompt. From there, a window should appear on your Android device. Here, you have the opportunity to protect the backup file password and start the process. Make sure your smartphone's display does not go to sleep during the backup process. They will stop working and won all the data of your device. When you have your new device set and connected to your computer, run the ADB Recovery command /Backup.ab. A similar window is displayed on your phone asking if you want to restore backup data. After several minutes, you should see an approximate copy of your old device on your new one. Unfortunately, ADB Aren backups is perfect. It is a path to a path to have a backup file sitting on a local computer instead of the cloud. Unfortunately, it's not necessarily capturing everything. How to transfer apps from an Android to other PhoneTransferring Android apps is actually quite simple, with some options available. 1. Restore previous backups If you successfully backup the device, the first step is to allow Android access your backups. This includes the list of apps you have installed on your last phone. Your new Android phone will automatically install all the apps available from the Google Play Store again. Unfortunately, some apps will remind you, but some will need to access again. That's down to developer choices; It's not your fault! 2. Go to your Google Play Store library that you may not want to replicate all your apps during phones switching. It is often a good idea to skip this option and start with a clean phone. You could quickly access your previously installed app but. To do this, open Google Play Store> Menu (three vertical lines)> My Apps & Games> Library. This will list you every app you have installed on any device associated with your account. This could be a long list of forgotten friends with many decisions to do while you go. It might be faster do the same thing just from a PC on the web, or it could be more slow depending on the number of clicks they are involved. Don't forget your passwords and the 2Fajoe Hindy / Android Authority Authority of the most important painkillers When switching from a disconnection of devices in â €
