If you want to spy not to install our app. Touch the Download button followed to install apps on your Android phone: our application is safe for download. We have installed on our phones! Please note our application is not a spy application. Step 2: Open app recording and follow the instructions to enter your mobile number and e-mail address. A verification code is sent to your e-mail number, and is valid for 120 seconds. Tip: Enter the mobile number in international format, including the country code. Example: USA +1, India +91, +44 UK, AUS +61 etc Step 3: Enter the code from the image, and the game is done! Your e-mail number logs for you. If you get a new phone, use the data to reinstall the application. Your data is never, never shared with anyone outside our company. Please see our Privacy Policy page or contact our Support Manager RAF if you have any questions. You can also send an e-mail directly from the app. The application requires the following permissions: calls and telephone registers. Why? To enable lost call alerts. CONTACTS. Why? So the application can queue the name of the contact that sent the SMS. If the sender is not in your contacts, the forwarded message will show the sender's number. SMS. Why? So the application can then read the incoming message according to your instructions. STORAGE. Why? To store logs and reports. Note All personal information on the logs and reports is prepared with ****. You can choose to deny authorization on one of these, but can affect the functions of the app. You will be required at the end of the process to subscribe. Note The application will stop working if you are not subscribed. Your mobile number and email address records the application for you, so if you get a new phone with the same number, you can use these same details to use the existing subscription. The application is self-update, so that the phone should automatically detect any updates and ready for you. Subscriptions are externally managed by bandwidth. We never see paper data, nor is stored on the app. Start your free 7-day trial now. To install on your Android phone, TAP button below: If you live in an area with good data reception, most of your daily communication will probably be held online. But we still get sms from time to time. Most of these are or security keys, delivery messages, or text from loved ones that Arena T online. Unfortunately, if youÀ € kings occupied and concentrated on your work, you can lose these important messages. To resolve this problem, you can automatically move forward on your Android smartphone to e-mail. Method is the following. Apps You can choose many applications can forward messages from your mobile phone to e-mail. For example, a simple SMS striker to email € Search return hundreds, if not thousands.You can also use smart applications such as: IFTTT and its alternatives, set the automatic transfer command. Without a doubt, the best Specially designed for SMS forwarding is SMS SMS forwarder-forward automatically to the PC or telephone. It is easy to use, you can use more filters and you can forward the message to another number. Better than all, it's free to use. Download: SMS Shipping Shipping (Free Purchase In-App It is possible) When installing the application and opens for the first time, youÀ € Viewed a screen that explains how the application works and what you can and can do. An alert will also be displayed on the next screen. If someone asks you to install the application, you're scammed. Warnings help protect your user base and prevent fraud. Ive approval for authorizing the application to read messages, telephone access status, telephone. Read contact details.Fter Tapping button agreement, you need to select to allow permission to the next three screens for the app to work. Step 2: Set your email address once your permissions are set, see an update note, followed by a key guide with general steps. Also, set the e-mail button. Add the address used to forward the SMS here. After touching the button you can use anyone via Gmail API or SMTP. If you don't have a Gmail account, you can use SMTP to forward your email. If you select the Gmail option, see different screens asking for permission. Send an e-mail to your account. . allowing the app to use your e-mail to forward your SMS to your specified email address. Tap to verify that the e-mail link has been successful to send a test e-mail control if you have received the test e-mail. Step 3. Disable battery optimization once you have set up your email, you need to disable battery optimization for your app. This will be able to continue the app running in the background and forward all the messages you receive. You can do it under the optimization of the use of the battery to ignore the screen. Tap Go to Settings, select All Apps from the drop-down menu, look for SMS.TAP shippers to select not allowed..Don t doesn't forget to press OK !! Back to app and press Done ... This completes the initial settings. Creating the first filter you may not want to forward all text messages received to the e-mail. The filter guarantees that only messages that meet certain conditions are forwarded. When the app's home screen appears, tap filter to see. Then touch + Start creation of the first SMS transfer command. Set the recipient from above, you need to select who you will receive the text message to be forwarded. This can be set for anyone or any number. For example, if this is a work phone and you want to forward the SMS received to an e-mail, enter your email address. Image Gallery (2 Images) Another use is when you have a team and the team must send a security code to your number to access your account. Just list your email address or phone number as a recipient and you're ready to go. You can add as much as recipients as you prefer, so you can include the entire company if you want. However, this is not recommended. Transfer conditions This is the section where you set the metric of the keyword that activates the SMS transfer. Each section has a question mark that you can tap to see detailed steps, but here you need to know: what do you want to transfer? It refers to the type of message that the Forwards.choice SMS app to transfer only text messages. However, if you want to submit notifications from other apps, such as banking apps, notice instead of. From whom you can choose which numbers your app forwards messages to and what numbers you want to ignore. If you leave this empty section, the app will scan all messages for the next rule. Text rules Here you can set the message to be forwarded only if it contains a specific word or phrase. If the word set is in a box, the app must satisfy both rules. However, under the option or option, only one rule must be implemented to perform messages. Change Content This section you can change the contents of the SMS. [ÀfèÀ, Àf, À »ÀfèÀVzÀf, À Àfè à € à € ÀfÀÀfèÀ ÀfèÀ, ÀfèÀVzÀ] You can customize the Your email adding your messages. There are also five other options to add details. Replace the word you can change or remove words and phrases from messages from This is especially useful if you want to hide certain details from a message. Image Gallery (2 images) Other settings This section can change the filter name and e-mail. If you have a dual sim phone, you can choose the sim that the filter monitors the sim number. You can also set the SIM used to forward the text message to another number. Under the option, select the warning you want to notify each time the filter is activated. If selected, all command execution instances will be saved to save the Finally, you can delay mail forwarding from up to 24 hours and 59 minutes. Delay delivery option. If you give T want to disturb the recipient over the weekend, tap Set work time. . In this way the filter for work only between the selected time and the day of the week. When you are satisfied with the result, tap Save .. you will be wondered if you want to receive a test message. Once completed [À È È È À È à à à È àzÀ½] I appear filter under the list. You can add the number of codes you want. Disable the filter is as easy as touching the slider. If the application is successfully running, you will see the foreground service under notification. This ensures that you are listening to the message and works as programmed. Image Gallery (2 images) SMS support developers are fantastic applications when you need to stay away from your phone, but still need to receive text messages. Easy to configure and use, while maintaining powerful features. Therefore, if you find this useful application, feel free to support developers. You can do it by removing the announcement with an in-app purchase. But if you pay for it or keep it for free, you get this splendid and light app that will make life easier. How to transfer text on Android have you received a message you want to share with others? HereÀ € s How to transfer the text to both Android and Samsung messaging applications: next to the Author Joey Moraes (15 Items were published) Other articles from Jowi Moraes How to automatically send SMS by e-mail on Android Work Pause To collect the phone to send a text message can be disruptive. Workflow will be interrupted and you could find difficulty focusing and focus again. This is why many messengers apps already have a desktop alternative so that users wona t needs to return Switch and Forth.This usually works for messaging platforms like WhatsApp, Skype, Slack, Facebook Messenger, and So away, but what about SMS? The good news is that for Android users, you can actually set this way that you can submit SMS to your emails. This means that now you have an alternative way to receive them different on your phone.There are different ways you can go on how to configure an SMS sender, so you get your choice on which the best version works for you needs.google Voice Open the Google Voice application (if Arena T use it you can download it here). At the top left, tap Menu and select Settings under Messages, lever on a forwarding messages to the email € SMS shippers Download and install the app from the Play Store launch the application and give it the permissions you wonders youÀ € VE accepted the terms and permissions, you should now see a set up button email € À €, tap that enter the e-mail address that the SMS will be time to select a Gmail Apia if you use a Gmail account, or a way SMTPÀ € If youÀ € is using a different provider once youÀ € See the application to, Rl youÀ € Good to go, but if your phone is equipped with a function battery optimizer, you might want to ask to ignore The app or deactivate it. This is because the application must be performed in the background continuously, in battery optimization mode could interrupt the IFTTTFFFor process who does not know, IFTTT is a phone automation application. It essentially allows users to create various scripts and scenarios, which once satisfied will perform a certain action. For example, every time you take a screenshot, you can set it so that it automatically sends a copy to yours You can do the same thing with SMS where you can set a series of events that will send the SMS you receive for your email. The best thing about IFTTT is that it is largely guided community so there are actually different scripts that you can choose to see which works best for you.Related items articles items
