Para obtener más información sobre la carga en cada sitio, consult el artículo de ayuda. 20 March 2020 | Soporte . Tutoriales | Video debut Capture is a program that allows you to record source images in real time from a Windows PC, as well as screens or images from a USB video device, and save them as video files. Registration can be from a digital camera or webcam as well. NCH Capture video release is easy to use. How do you use Debut Video Capture? Capture video release is easy to use and has a pretty intuitive interface. The program captures videos from a series of internal and external sources. The interface in dark mode shows a top panel and lists the sources from which you can capture the videos. These are Webcams, Device, Network, Screen and Camera Overlay. The upper panel also shows where you can review the recordings and other options. From the screen, you can also choose to capture only a custom section or from the wholeOnce you select the source, you put an overlay of the camera, thenscreen and webcam video can record simultaneously. To record, the 3 buttons are clearly defined: Record, Pause and Stop. Once the recording is finished, the device converts the video to a .avi format (as default), and can reproduce it as well. There is the possibility to add effects or adjust the video in terms of color, contrast, shades, etc. There is also an option to add text to the video and adjust the watermark. You can easily select or crop the registration window, making it customizable at any time. You can record the screen in a set of configurations depending on your device or source. It can be made in found sizes of Android devices, iPhone, PS4, or Xbox. There is also a quick capture option, which can capture by default standard size. You can also adjust the camera overlay based on preferences, as well as the input device from the internal webcam to an external video source. There is also the possibility to change camera and microphone settings and adjust volume and alignment. What is the purpose of Debut Video Capture Good? The program is excellent for video tutorials, so you can talk about the video while viewing a concept in real time. Remote demonstrations and presentations would work well with this program. You can easily and directly share the video on LinkedIn, Facebook and Twitter. In addition, the program does a great job in trying to capture processes, which means that you can conduct a series of tasks, and record the process to be able to replicate it later. Some alternatives to the program include Camstudio, ezvid, Hypercam, Jing, etc. What are the advantages of Debut Video Capture? NCH Capture video release is free software. You can download it unauthORIZED. It is easy to use, and no experience is requiredprevious video recording, just connect to a network, so other devices can connect to the program. once the devices were selected and the part of the screen decided, the actual recording is quite simple: record, pause, pause,stop are all the actions you need to know. Videos and capture region are highly customizable. The program is excellent to record a demo, presentation, or tutorial. The fact that you can also have an overlay camera adds to the product even more. Just record and share LinkedIn, Facebook or Twitter directly from the program, or save the recording as an Avi file on the local storage device of the drive/external. What are the disadvantages of Debut Video Capture? When the program opens, it is rather intimidating at first sight. It takes a little bit of getting used to starting using it. The interface is intuitive, but perhaps there are too many options on the screen at the same time, and that may appear confused. Once the user tries it once or twice, more features are discovered. For someone totally new, it can be a challenge to navigate through the program. There is no live streaming capacity. You need to save the entire video, then share it separately on YouTube or any other streaming platform. This may have been much more useful than connecting the Share function only to social media channels. What is the final verdict? Capture video release is a great program that goes beyond the screen capture software. It is an innovative and easy way to capture the image or screen and record with or without an overlay of the camera. For demos, tutorials, presentations or remote instructions, this title is ideal. The interface is intuitive, and while it can be overwhelming at first, you will find yourself knowing how to handle each function properly. A drawback of the program, however, is its lack of live streaming capacity at Youtube or other online video platforms. Moreover, for those interested in using the program for commercial purposes, a pro version of this title will be necessary. .Debut Screen Capture Softwarefor Windows allows you to capture videos from your PC and record videos from almost any source.
