You cannot do this at present. You entered the system using another card or window. Charge again to update the session. You are connected to another map or window. Charge again to update the session. The goal of Google in the case of Android 11 was to improve several key aspects of the operating system requiring improvement, one of which was notifications. Notifications in previous versions of Android were very good, but in Android 11 we presented a new function that gives priority to important notifications of chat/news. The Messenger "Chat Head" function, which has existed for several years. When you get SMS, WhatsApp or something else, you can turn this notification into a pop-up chat window in the upper part of the screen. Whatever you do on your phone, chat bubbles guarantee that you will always have easy access to this conversation. First of all, you need to know how to open a pop-up chat window in Android 11. Fortunately, you will not be able to "hold a new SMS/message with a finger to show notifications." Pay attention to the mug icon (in the lower right corner of the notice). In the chat bubble! It should be remembered that the creators of the application should add to their work the support of the chat bubbles, which means that your favorite message for sending messages can be immediately incompatible with this function. However, the purpose of speech in the chat is that it can be used in all messages used to send messages such as Google Messages, Facebook Messenger, WhatsApp, Telegram, Discord, Slack, etc. Your screen, it is time to start using it. Your country balls are fast labels for conversations that are carried out in various messages for sending messages, which means that all elements of the chat user interface look exactly the same as when opening the application. To open a pop-up hint, tape the "control" in the lower left corner to display the hint of the chat, install the "+" icon to display the recently used balls. Chats in which you want to be in the know, but you do not need to stop this bubble on the screen after the end of the chat. Fortunately, it is very simple to remove it. You can't do it now. You are logged in using a different card or window. Charging is underway to refresh the session. You signed a different card or window. Charging is underway to refresh the session. Google's goal in the case of Android 11 was to improve some key aspects of the operating system that required refinement. One of them is notifications. Notifications in previous versions of Android were great, but in Android 11 we introduced a new function that gives priority to important chat/exchange notifications. This is called "cat bubbles" and is essentially a copying/paste operation of the "cat head" Facebook Messenger, which has been existing for several years. When you receive a text message, WhatsApp or anything else, you can now change this ordinary notification into a cat floating bubble above the screen. No matter what you do on your phone, chat bubbles always provide easy access to this conversation. Easier. After receiving a new SMS/message, move your finger down to display notifications. In a cat balloon! It is important to remember that the application developers must add chatrus management to work. This means that your favorite message for sending messages can be directly compatible with this functionality. But the purpose of the chat speech is to use Google, Facebook Messenger, WhatsApp, Telegram, Discord, Slack, etc. They are available in all applications for sending the messages you use, including your screen - it's time to start using it. Your bubbles with cats are just a quick shortcut to chats in various messages for sending messages; This means that all elements of the user interface for a bubble kitty will look as if you were opening the full application. When the chat bubble appears on the screen, touch the Operation option in the lower left corner to open the presentation of the chat speech and display recently used balloons. Talks in which you want to be up to date, but you need to keep this bubble on the screen as soon as the conversation begins. Fortunately, removing it is very easy. Cat cloud. Transfer it to the X icon at the bottom of the screen. Allow deletion. Source: Android Central Chat Change Windows Pop-up settings. Find additional settings that will allow for exactly configure work with them. To do this, we need to go to our phone messages. Open your phone program Settings. Click on Programs and Notifications. Click "Watch all programs". Click the postage program that you want to configure. Source: Android Central. Tap the bubbles. Solder: Android Central on this page has several different options as the program interacts with conversation bubbles. You can configure that at all the pop-ups of unused conversations, only certain program contacts are allowed to run a pop-up window or display all conversations in a bubble format. We recommend that you view all your conversation programs and configure your settings. At the top, as you want, then your conversation will be as smooth and enjoyable as possible. Some people have trouble making this feature properly (whether they have a high-end Android phone or not), which takes all the pleasure. If you have problems with the POP-P Windows Chat, we provide some tips to solve the problem. First of all, you need to make sure that POP-P Windows chat windows are turned on for the application you use. Yes, it seems obvious, but it won't hurt to check. If the gadget identifies "nothing can appear", you found the culprit. It is also possible that the program you are trying to use with chat bubbles simply does not support API. If so, just wait for the developer to install this feature. You can also try to turn off and turn on the phone again. This is a solution to many technical problems because it works most often. Smart phones are sophisticated small cars, and sometimes they are just stupid. Turn off the phone, let it rest for a few minutes and after a new start, everything will return to normal.
